Sprint #1 retrospective

Time: 12:47 pm Friday 13th September

Present Members:

- Dana Casella
- Patrick Brett
- Andy Zhan
- Ehtesham Ghani
- Uyen Tran (Sara)

What was achieved in the sprint:
- Frontend prototype for 'view repositories'
- Basic email functionality and template
- Infrastructure (hosting and database) provisioning and basic deploy scripts
- Preliminary database-backend interface for user signup
- Backend API response to Github webhook requests

Problems:
- Sprint started out slow
  - Due to team members learning to use technologies - should not be a problem going forward as team members now understand the technologies
- Some members could not be at the weekly meetings.
  - Solution: find new meeting dates, still hold meeting even if 1 or 2 members cannot come and update missing members on what they have missed.
- Formatting of tasks was not as expected by client
  - Solution: transfer tasks to Gitlab board and link tasks
    - Need to time track each task
